Patent 55293-00003

PROPOSED ALTERNATIVES FOR CLAIM 13

DRAFT

Claim 13 (ALTERNATIVE 1)

A method of regenerating generating hyaline cartilage, comprising:

- a) generating a recombinant viral or plasmid vector comprising a DNA sequence encoding transforming growth factor β1 (TGF-β1) or BMP operatively linked to a promoter;
- b) transfecting/transducing transfecting in vitro a population of chondrocyte eells chondrocytes with said recombinant vector, resulting in a population of transfected/transduced transfected connective tissue cells; and
- c) injecting a composition consisting of the transfected/transduced transfected population of ehondrocyte cells chondrocytes and a pharmaceutically acceptable entries solution into a joint space of a mammal such that expression of the DNA sequence encoding TGFβ1 or BMP within the joint space occurs resulting in the generation of hyaline cartilage in the joint space.

Claim 13 (ALTERNATIVE 2):

A method of regenerating generating hyaline cartilage, comprising:

a) generating a recombinant viral or plasmid vector comprising a DNA sequence encoding transforming growth factor β1 (TGF-β1) or BMP operatively linked to a promoter;

Serial No. 09/702,718

Patent 55293-00003

- b) transfecting/transducing transfecting in vitro a population of chondrocyte cells chondrocytes with said recombinant vector, resulting in a population of transfected/transduced transfected connective tissue cells; and
- c) injecting a composition consisting of the transfected/transduced transfected population of chondrocyte cells chondrocytes and a pharmaccutically acceptable carrier into a joint space of a mammal, wherein cells move freely within the joint, such that expression of the DNA sequence encoding TGFβ1 or BMP within the joint space occurs resulting in the generation of hyaline cartilage in the joint space.

 (Support for bolded amendment may be found at page 17, line 17).

Claim 13 (ALTERNATIVE 3):

A method of regenerating generating hyaline cartilage, comprising:

- a) generating a recombinant viral or plasmid vector comprising a DNA sequence encoding transforming growth factor β1 (TGF-β1) or BMP operatively linked to a promoter;
- b) transfecting/transducing transfecting in vitro a population of chondrocyte cells chondrocytes with said recombinant vector, resulting in a population of transfected/transduced transfected connective tissue cells; and
- c) injecting a composition consisting of the transfected/transduced transfected population of ehondrocyte cells chondrocytes and a pharmaceutically acceptable earrier solution into a joint space of a mammal, wherein cells move freely within the joint, such that expression of the DNA sequence encoding TGF\$1 or BMP.

Serial No. 09/702,718

Patent 55293-00003

within the joint space occurs resulting in the generation of hyaline cartilage in the joint space.
